# 1000 joueurs IA sur un serveur Minecraft

<https://www.technologyreview.com/2024/11/27/1107377/a-minecraft-town-of-ai-characters-made-friends-invented-jobs-and-spread-religion/>

- Des centaines d'agents de l'IA alimentés par LLM sur un serveur MineCraft
- Laissés à eux-mêmes, ils n'ont pas seulement survécu — ils ont prospéré.
- Ils ont :
  - développé des emplois dans le jeu
  - partagé des mèmes
  - voté des réformes fiscales
  - se sont spécialisés (constructeur, défenseur, commerçant et explorateur...)
  - et même répandu une religion.

“La véritable puissance de l'IA sera déverrouillée lorsque nous aurons réellement des agents véritablement autonomes capables de collaborer à grande échelle”

Son rêve est de créer un grand nombre d'humains numériques “” qui prennent réellement soin de nous et travailleront avec nous pour nous aider à résoudre les problèmes, ainsi que pour nous divertir.

“Nous voulons construire des agents qui peuvent vraiment aimer les humains (comme les chiens aiment les humains, par exemple),”

# Le neurone “Donald Trump”

<https://www.foxbusiness.com/technology/ai-developers-discover-donald-trump-neuron-expert-says>

- Donc, chaque réseau de neurones que nous avons examiné, nous avons trouvé un neurone dédié à Donald Trump.
- C'était la seule personne qui avait toujours eu un neurone dédié.

## Christopher Olah

I work on reverse engineering artificial neural networks into human understandable algorithms.

I'm one of the co-founders of **Anthropic**, an AI lab focused on the safety of large models. Previously, I led interpretability research at **OpenAI**, worked at **Google Brain**, and co-founded **Distill**, a scientific journal focused on outstanding communication.

My blog should not be taken to reflect the views of any organization I'm affiliated with.
